Projects

Tours and Travels Website - Tourism website | [Github Link](#) |

- Built a responsive landing-page website using media queries to manipulate the screen into variable screen sizes.
- Used DOM manipulation to toggle the menu and the elements for the mobile-first design approach.

Bookmark Tracker - Chrome Extension | [Github Link](#) |

- Built a Chrome extension that allows the user to save the current window tab and input field.
- Used Local Storage to manage the information in the user storage space so that even after refreshing, the info will still render to the user.

RememberMe - An address book | [Github Link](#) |

- Developed a CRUD application project that defines several regular expressions to validate user input for a form.
- Utilized the DOM API to access and manipulate elements on an HTML page.

Working on "Make My Build" - Android Application

- An Android companion crafted in Java, offering users a seamless journey to meticulously design and budget their ideal personalized PC setup.

Certifications

- DevOps Tools
- Amazon Web Services (AWS)
- Android Studio Course
- Software Testing
